PERSONAL INTRODUCTION

I am an ambitious and hardworking individual with a passion for all things digital. Having recently completed a course in Full Stack Web Development and exploring all aspects involved, and with my professional background experience in digital Marketing and Communications, I have a keen eye for detail and excellent communication skills when either working within a team or liaising with clients. I have an independent ability to handle tasks with a methodical approach and ensure projects are completed to the highest standard and in the required time frame. For any knowledge I may initially lack, I make up for it by ensuring to learn fast and with complete understanding.

EDUCATION

Code Institute

2020 - 2021

Diploma in Full Stack Web Development

2:1 – Second Class Honours

After graduating from University, I started Digital Marketing roles working closely with external Web Developers and took great interest in the different coding languages, along with the initial process from UX/UI design to website production. Realising this was a keen interest of mine, I enrolled in a Full Stack Web Development Diploma course at Code Institute (<https://codeinstitute.net>). They are the UK's only credit-rated coding Bootcamp, credited by the University of the West of Scotland (USW). The course took a year to complete and enabled me to develop skills in main coding languages HTML, CSS, JavaScript, Python, and Django.

Along with main coding languages, the course also expanded on frameworks such as Bootstrap and Materialize, Application Program Interfaces (API's), jQuery, database programs such as MongoDB Atlas and relational database MySQL, deployment through GitHub pages (switching to PostgreSQL where applicable) and Heroku, Stripe payment system and Amazon Web Services.

I completed four milestone projects with Code Institute which were all built through GitHub using Gitpod. I used version control through Git to modify the repositories to produce a step-by-step log during development. Before starting the milestone development, I started with UX design by mapping out the 5 planes method of user experience and essentially created a business plan of customer and company objectives and requirements. I created wireframes for each project through using either Adobe Creative Suite programs or Balsamiq which assisted in the website development structure.

Modules studied in this course:

- HTML Fundamentals
- CSS Fundamentals
- User-Centric Frontend Development
- JavaScript Fundamentals
- Interactive Frontend Development
- Python Fundamentals
- Practical Python
- Data-centric Development
- Full stack frameworks with Django

GitHub profile: <https://github.com/Amiejohnstone18>

First Year Modules:

- Research Skills
- Contemporary Media Debates
- Making Media, Meaning & Messages
- Media Consumption
- Introduction to Professional Communications
- Digital Media Practice

Third Year Modules:

Panarc Interior Solutions, Berkshire
Marketing Communications Manager

March 2019 – Present

Panarc interior solutions are the sister company of The Glass Office People. I had initially joined on a temp basis as an Accounts Assistant after coming back from Australia. With both companies wanting to advance on their marketing and advertising, I stayed to develop on these, therefore, roles and responsibilities for both are the same.

Accounts Assistant

March 2019 – Present

Main responsibilities include:

- Process incoming invoices and credit notes from suppliers into the integrity system Evolution M (Mardak).
- Checking supplier statements are up to date with invoices and payments.
- Manage employee credit card statements.
- Process fortnightly Subcontractor invoices to be raised for payment and send out payment certificate receipts to the Subcontractors.
- Manage company vehicles.
- Book out and keep track of employee holidays.
- Arrange for employee training as and when necessary.
- Create new job contracts on Mardak with the relevant information.
- Archive expired job contracts/ account admin.
- Handle purchasing of office equipment.
- Create purchase orders for ordering site materials.

January 2015 – July 2017

Next, Camberley
Sales Assistant – Part-time (Student Study)

July 2013 – July 2014

References are available upon request.

PROJECTS

All projects were completed during the Code Institute course as Module Exams. Wireframes for each can be found in the README.md files in my GitHub repositories https://github.com/Amiejohnstone18_

Milestone 1 - HIIT Fitness

https://amiejohnstone18.github.io/HIIT_Fitness/index.html

Built using main technologies HTML5 and CSS. The requirements for this project were to build a static website advertising a service or product for a company. I chose to build a gym website offering information on the class timetable, meet the PT team, where to sign up and how to contact the gym.

Milestone 2 - Happy Hour

<https://amiejohnstone18.github.io/Happy-Hour/index.html>

Happy Hour was built using main technologies HTML5, CSS, and JavaScript. The purpose of this project was to build a website, incorporating an API. After much research, I found a cocktail API and decide to create a website whereby a user can select a cocktail and be provided with its name, ingredients, rating, and image.

Please note: This API is no longer available for use.

Milestone 3 - The Baking Book

<https://the-baking-book.herokuapp.com/index>

The Baking Book was built using main technologies HTML5, CSS, JavaScript, and Python. The requirements for this project were to use CRUD functionality (Create, Read, Update, Delete) to give the user the ability to create a new receipt card, read it, update it, and also delete it. It is accessible for anyone to use CRUD on the website therefore recipe cards do regularly get deleted.

Milestone 4 - Willow Flowers

<https://willow-flowers.herokuapp.com/>

Willow Flowers was the 4th and final milestone project. This was built using main technologies HTML5, CSS, JavaScript, Python, and Django. The purpose of this project was to ensure users were able to sign up and log in to personal accounts and access their saved data and purchase products. Also, the website owner was able to use CRUD to update the website with products when necessary.
